Docket Number:

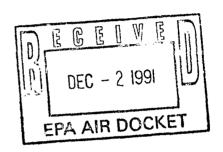

A-91-46

A- 91-46 1V-D-52

October 18, 1991

Mr. William P. Reilly EPA Administrator Environmental Protection Agency 401 M Street, SW Washington, DC 20460

Dear Mr. Reilly,

Once again the government's regulatory process is resulting in the opposite of its intent.

An additive for gasoline, HITEC 3000, in use in Canada since 1978, enhances octane and reduces nitrogen oxide emissions. It is used in leaded gasoline, but has apparently been snarled for years in EPA tests as an additive for unleaded gas.

Southeastern Wisconsin is under restraints because of air pollution. These are very damaging to our economy and thereby to our citizens. We would applaud methods which would reduce emissions.

I have no doubt that your agency has a rationale for these extensive tests. We would hope that you might work to expedite this procedure by the January 8, 1992 deadline.

Sincerely,

Mary Kohler Public Affairs
